RE: AIRS Facility No. 039-00001, Mountain Home Air Force Base
Final Amended Tier I Operating Permit
Final Revised Permit to Construct

Dear Colonel Hansen:

The Department of Environmental Quality (Department) has administratively amended Tier I Operating Permit No. 039-00001 and revised Permit to Construct No. 039-00001 for Mountain Home AFB in accordance with IDAPA 58.01.01.381 and 209.04, *Rules for the Control of Air Pollution in Idaho*. Both of these permits have been changed to reflect the change of the name of the responsible official as indicated in your February 19, 2003 submittal. This is the only change that was made to either permit.

Enclosed are administratively amended Tier I Operating Permit No. TI-030003 and revised Permit to Construct No. P-030004. Since this project does not significantly change the terms of your permit, the Department will not contact you regarding a meeting to discuss the terms of the permit. However, if you wish to meet to discuss the permit terms and requirements, you may contact Mike McGown of the Boise Regional Office to schedule a meeting. If a meeting is scheduled, the Department recommends the following representatives attend the meeting: your facility's plant manager, responsible official, environmental contact, and any operations staff responsible for day-to-day compliance with permit conditions.

If you have any questions, please call Bill Rogers at (208) 373-0502 or wrogers@deq.state.id.us.

Sincerely,

Stephen E. West, Administrator
Air Quality Division

3. EMISSIONS UNIT GROUP 2: JET ENGINE TESTING

Summary Description

The following is a narrative description of the jet engine testing operations regulated in this Tier I operating permit. This description is for informational purposes only.

Mountain Home Air Force Base tests aircraft engines as required by operational conditions. The engines are tested in either one of two "hush-houses", which were constructed to minimize the noise from engine test operations. The stack has numerous baffles to dissipate the sound energy. Engines are removed from aircraft and transported to one of the hush houses, affixed to a test stand, and then adjusted and/or repaired. Upon completion of the adjustments and repairs, the engine is test fired at idle, approach, intermediate, military and/or afterburner power settings for a short time period. Each criteria pollutant has an individual emissions rate when operated at each power setting.

Table 3.1 lists the device(s) used to control jet engine testing emissions.

4. EMISSIONS UNIT GROUP 3: AIRCRAFT AND AIRCRAFT PARTS SURFACE COATING SPRAY BOOTHS

Summary Description

The following is a narrative description of the corrosion control units regulated in this Tier I operating permit. This description is for informational purposes only.

The corrosion control treating process consists of surface preparation and painting aircraft and aircraft parts in one of two paint booths. Aircraft and some parts are treated in the large paint booth (LPB-1330), and parts are painted in the small paint booth (SPB-1330). The items to be treated are first cleaned with solvents, then painted using HVLP paint spray guns. The painting equipment is cleaned using solvents after use. Both paint booths exhaust through particulate filters that have a manufacturer-rated efficiency of 97%. The large paint booth also exhausts through a carbon adsorption filter, which has a manufacturer-rated efficiency of 90% for VOC emissions. Permit to Construct No. 039-00001, dated May 30, 2002, limits the amount of paint and solvent used on a 24-hour and annual basis. Also, the amount of paint used containing HDI is limited daily.

Table 4.1 lists the device(s) used to control spray paint coating emissions.

Emergency

27. In accordance with IDAPA 58.01.01.332, an "emergency" as defined in IDAPA 58.01.01.008, constitutes an affirmative defense to an action brought for noncompliance with such technology-based emissions limitation if the conditions of IDAPA 58.01.01.332.02 are met.

National Security Emergency

28. Since MHAFB is a military combat facility, at any time, MHAFB may be ordered to increase its level of readiness related to a national security emergency. Such an emergency may cause a surge condition at MHAFB that could result in emissions greater than specified in this permit and/or make it impractical to meet one or more of the permit terms. In the event that the Responsible Official determines that a surge condition exists, the Idaho State Air Quality Program Administrator shall be notified within five business days after cessation of a surge condition occurring and within five business days after cessation of such a condition. Within 45 days after cessation of a surge condition, the Responsible Official shall submit a report to the Idaho State Air Quality Program Administrator detailing the permit conditions (if any) could not be met during the surge condition.
